

PSB SubSeries 150 Powered Subwoofer

Deep Bass and Deeply Versatile

Small, Slim, and Easy to Live With.

With the SubSeries 150, PSB has reimagined the subwoofer. Most subwoofers are large cubic forms that don't often fit very well in your living room. The SubSeries 150 on the other hand, is a compact, slim, rectangular shape, allowing it to slip in easily beside, behind, or underneath living room furniture. This versatile and decor-friendly design with a beautiful curved gloss black cabinet also offers several clever installation options.

Features

- Top Mounted Volume, Crossover and Variable Phase 0-180°
- Auto On/Standby
- LFE Input and Output
- NA & EU Power Cords Supplied
- > 0.5W Standby Power Consumption
- Wall Mountable
- Place upright with feet or flat with the driver facing up

Get off the floor!

When you really want to get down with some bass, get up off the floor! The SubSeries 150 has a very flat profile suitable for mounting discreetly on a wall, which also frees up valuable floor space. We've included a convenient wall mount bracket to allow the SubSeries 150 to be located on almost any wall of your room.

Go ahead, take it lying down!

While the SubSeries 150 can stand up vertically or horizontally for placement behind or beside a sofa or chair, thanks to its innovative bracket, you can also lay it down and slide it out-of-sight under a couch or end table.

Dig Deep and Play Loud.

The SubSeries 150 may be small and room-friendly, but it is a full-fledged PSB subwoofer carefully engineered to pump out prodigious quantities of well-defined, low distortion bass. With 100W of power from its cool running and highly efficient amplifier, there is plenty of power on tap to add weight to your favourite music and excitement to your movies. The custom designed 6.5" woofer utilizes a polypropylene cone and high temperature voice coil with a vented pole piece.
